

Attention!

Addendum to Winchester Safe's Owner Manual! Removing the safe from the pallet feet

If your TS-22-11 Winchester Safe has this type of pallet feet, please follow these instructions:

The following is **BEST** performed with several individuals and is only a suggested method. Winchester Safes will not be liable for any accidents, damages or injuries that may occur.

Step 1

Insert a screwdriver (flathead or phillips) through the pallet foot holes. Make sure the screwdriver is long enough to go through both holes, both sides of the pallet foot.

Step 2

Slightly push upward on the safe from the side while somebody else removes the pallet feet. Rotate the screwdriver counterclockwise and unscrew both feet from one side of the safe only.

Step 3

Repeat step 2 for remaining two feet on the other side of the safe.

Step 4

Lower the safe to ground once the pallet feet are removed safely.
