

**Antenna Extension Cable  
(MV-8M)**

The antenna extension cable is perfect for increasing the range of the Hyndsight System. This handy cable set can be used in the barn, trailer, or even on an 8 rowing shell. For added versatility, distance, and signal strength. Highly recommended for an 8 rowing shell, the Antenna Extension Cable boosts signal strength between the camera and monitor, providing the coxswain with the crucial view ahead of the boat. You'll get an incredible connection with no virtually lag time.

**To Use:**

- Attach gold connector of one cable to antenna connection area of camera.
- Attach gold connector of second cable to antenna connection area of monitor.
- Re-pair the camera to the monitor if necessary.
- For Trailers and Barns: Run the antenna from each cable to the outside of the trailer and truck or the barn and home to create line of sight.
- For Rowing Shells: Run the camera's cable along a rigger near the bow and the monitor's cable along a rigger near the stern to create line of sight.

Set includes two 8-meter cables with two (2) fixed antennas.

1 Year Manufacturer's Warranty stating the Antenna Extension Cable is free from defects in materials and workmanship for a period of 1 year from the date of purchase. This warranty does not cover products damaged by mishandling or irregular use. We make no other warranty, expressed or implied, and will not assume any liability for damages, labor, or delays incidental hereto.
