

# WEED<sup>®</sup> ZINGER

Grasp the padded handle with your dominant hand.

Do not squeeze the trigger at this point.

WHEN READY!

Locate the core of the weed and place the powerhead directly on the weed. Step firmly on the base of the pedal. This causes the tines to close in and around the root. The center shaft will move upward and engage a series of notches. Engage 3-4 notches for best results.

Twist the handle of the Zinger 90 degrees to sever the weed. Then, pull up on the black handle so that the Zinger is out of the soil.

Once the Zinger is out of the ground, twist the tool and squeeze the trigger to release the weed.
