Lawnmower Hi-Hitch

Model LNPHH650

Riding Lawnmowers have the power and the low center of gravity to be natural towing machines. With the Hi-Hitch's dual attachment points—one for a trailer hitch ball and one for a hitch pin—a regular riding mower can be transformed into one of the handiest tools ever for pulling small trailers. Whether you're hauling off trash on a utility trailer, bringing up firewood or just positioning your ski boat in your garage, the Hi-Hitch gets the job done!

The Hi-Hitch adds 12" of height to the lawnmowers tongue. The LNHH650 is braced and positioned perfectly at just the right height to keep trailers level and well-balanced. With super-strong aircraft aluminum construction, the Hi-Hitch provides a lot of "horsepower" with very little weight added to the machine. Its weight capacity is whatever the lawnmower's stated tongue capacity is. Installs in easily and accepts all conventional trailer-hitch balls (trailer hitch ball not included).

The Hi-Hitch mounts to most conventional riding lawnmowers with a minimum of drilling or modifications. Brackets mount 12" - 14" wide.
