

CORNISH – DARK, BUFF, WHITE-LACED RED

Cornish are stocky meat birds from the Southwest corner of England with short, close-fitting feathers. Much of the chicken meat bought in modern supermarkets comes from hybrid birds that have Cornish influence in their breeding. Cornish can be active foragers but are poor egg layers. They tolerate confinement well but can be free ranged.

Main use – M

Egg Production – L

Size and color – S-M/Brown

Best kept free range or confined; heat tolerant.

Classified as Watch by the ALBC.
